TASK 4: Finding neighboring weight vectors: Find the weight vectors that are neighbors to the winning weight vector. Common techniques for finding the neighboring vectors, include others hexagons, concentric squares, and the gaussian function.

TASK 4 Demo Outline: "Finding neighboring weight vectors"
(setf map '()) ;create an empty list
(create map 16) ;give the list 16-squared empty list elements
nil
(visualize map) ;displays the map-list as a grid
