

**TASK 5:** Creating the learning function: Given that the winning weight vector is scaled to be more like the sample vector. The neighboring weight vectors are also affected; whereas the further away the neighbors are the less they will learn. A common technique for the decreasing rate of change for each weight, is to use the gaussian function.

TASK 5 Demo Outline: "Creating the learning function"

(setf map '()) ;create an empty list

(create-map 16) ;give the list 16-squared empty list elements

nil

(visualize-map) ;displays the map-list as a grid
